

Explotrain®

Model X-LRT

“Accelerate Your Training”

Continuously Monitor and Control up to Ten Explosive Simulators at a Time

The Explotrain® Model X-LRT Handheld Transmitter provides a rugged housing and an intuitive interface for controlling multiple Explosive Simulators. Ten LEDs are each dedicated to a Simulator and continuously indicate not only the communications status of the unit but its Armed/Disarmed/Firing state as well. A single operator can control and monitor an entire training range of several acres from one location.

Effectively controlling a range and utilizing instructors is a difficult aspect of today's training.

The X-LRT allows an individual to control all of the Explosive Battlefield Effects for a single range. This centralized control not only provides for a safer environment but allows other instructors to monitor students and provide instruction without the distractions of individually monitoring the effects for a particular scenario.

At Explotrain® all of our products are 100% made in the USA and they are made combat tough with our full product warranty. We know our freedoms depend on your success and we are available at anytime to provide any assistance we can, so you can keep your ranges operating smoothly.

Specifications

- 915 MHz
- 200m to 600+m Range
- Control up to 10 X-0 Units
- Constantly monitor Units' communications and Armed/Disarmed status
- Water resistant housing
- Intuitive Interface
- Simple keypad operation

Compatible X-0 Systems

- X-02
- X-03
- X-04
- X-OMG
- X-OHW
- X-OMW

Requires X-RB Receiver Option
